

Make a Ladder Toss Game

Information provided by
www.OutdoorGamePlayers.com

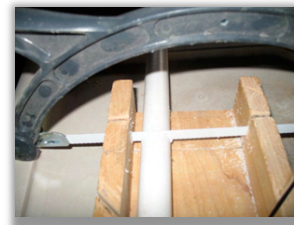

What you need to make ladders

- 44 feet of 3/4" PVC pipe (or 1" PVC)
 - you'll generally buy 5, 10ft pieces
- 12 L connectors - 3/4" elbows
- 12 T connectors - 3/4" tees
- Saw or pipe cutter
- PVC glue (optional)

Cutting the PVC pieces

- Cut 14, 2ft pieces of PVC pipe
- Cut 16, 1ft pieces of PVC pipe
- Cuts can be made with the cutting device of your choice.
 - hand saw, table saw, jig saw, etc.
- Rough edges from cuts can be lightly sanded, if you choose.

Assembling the PVC pieces

- Connect the cut pieces with the T and L (elbow) connectors
- The 2-ft pipes will be used for the back footprint as well as the ladder rungs. The front footprint doesn't need to be as long as the back because all the force is coming from the front. (A footprint is what is holding the game up)
- No need to use PVC glue. For transport, it's easier to have the option of disassembly.
 - Some people will glue everything together except for the base to ladder connection. That leaves to pieces of similar size, easy for hauling.

How to make the Bolos

- You will need 12 golf balls. Paint 6 one color and 6 another color.
- Drill a hole going through the center of each golf ball.
- You will need 6 - 18inch pieces of nylon rope.
- Thread the rope through the holes that you previously drilled.
- Place a golf ball at each end of the rope.
- Tie a knot right in front of and behind the ball to hold it secure.
- Use a match or a lighter to slightly melt the knot. This will help the knot stay tied.
 - If you made your holes a little big, you may want to wind the rope through the knot twice to make the knot a little bigger so that it won't pull back through the holes.
